Figure 10 is a plot of Bit Error Rate (BER) versus Average Energy per Bit to Noise Power Spectral Density (Avg.  $E_b/N_0$ ) in dB for  $L=15$ . The y-axis (BER) is logarithmic, ranging from  $10^{-6}$  to  $10^0$ . The x-axis (Avg.  $E_b/N_0$ ) is linear, ranging from 0 to 14 dB. The plot compares four simulation results (mode 1, mode 2, mode 3, mode 4) with uncoded 8QAM and uncoded BPSK. Mode 4 shows the best performance, followed by mode 3, mode 2, and mode 1. The uncoded schemes perform significantly worse than the coded modes.
